ENGLISH THISTLE LINE

of

Tudor Cast Bronze Ornaments

Nearly all modern homes being built today to resemble the old English Manor houses bear the architectural characteristics of the Tudor period when most of these old houses were erected.

Tudor ornamentation being influenced by the ebbing tide of Gothic popularity, is stiff and crude. Very few definite characters outside of the Gothic are used. These are the Tudor Rose, the Battlement, the Linnen Fold and the Thistle.

This last emblem, supposedly signifying Independence, is the chief motif of the English Thistle Line shown herein. Other points such as the Trefoil, Grotesque Heads and the treatment of Fleur-de-Lis in the canopy and back plate are reminiscent of the Gothic feeling of this Period.

The wrought effect patterned in these bronze castings follows in line with the crude Tudor iron work, yet offers a tractable metal permanent in finish and construction.

Cast Bronze Fixtures

Distinctive designs in lighting fixtures are necessary in decorating the modern home or apartment building. These buildings today, because they are unusually beautiful, require modern authentic ornaments to harmonize with their decorative interiors.

Price, however, is often a big factor in the selection of proper equipment. For this reason our designers achieved the unique construction and elimination of parts found in the English Thistle Line.

This together with the tremendous production of these fixtures, allows prices to be placed on them that would be impossible under ordinary conditions, considering the design, workmanship and beautiful finish offered.

Bronze, because of its greater copper content, is more durable than brass. Made of virgin metals, bronze has a bright reddish gold appearance and will hold its color permanently.

In the English Thistle Line this rich natural color is preserved and made more effective by special care in the application of the Fired Bronze finish. The touches of deep Blue and Red in the shields help bring out the attractiveness of these designs.

This line, from every angle, is ideal for use in apartment buildings and large residence operations. Special designs in harmony with the line are available for use in lobbies and entrances. Please write for sketches.

Cast Bronze Fixtures

SPECIFICATIONS

MATERIAL — Bronze castings, made from virgin metal, are used in this line.

FINISH — No. 301 Fired Bronze and Colors is a special new treatment of natural bronze metal bringing out the high color. The fine ornamental detail is accented by the antiquing process, while touches of color on the shields add to the general effect.

WIRING — All fixtures are priced herein wired and assembled ready to hang. Fixture numbers F-01945, F-01946, C-01947, F-01948, F-01949, C-01950, L-01951, C-01952, C-01953 are wired with keyless sockets. Brackets No. B-01955 and B-01956 are wired with keyless sockets and canopy switch. The candlestick S-01954 is wired with pull sockets, six foot cord and plug.

PACKING — Each fixture is packed in an individual carton and labeled for immediate identification. No package charge.
